MISSION READY FROM THE START

Monkton is the Federal leader in secure mobile solutions, delivering mission-focused mobile apps in a secure and repeatable manner. Developers are able to focus on building the user interface and web services of their apps, and we take care of everything in-between—From data at rest, data in transit, identity management, user management, API management, secure offline operations, edge computing—we do it all. We handle the policy and compliance so **our customers can focus on their business and the problems that need solving.**

THE MONKTON DIFFERENCE

Monkton builds federal solutions on time and on cost in months, if not weeks. Our secure, mobile solutions are easy-to-use and integrate simply into existing environments.

Our core product, Rebar, allows organizations to build **secure, NSA NIAP compliant mobile solutions that meet policy needs day one.** With identity, data at rest, data in transit, and policy needs covered, developers can build secure apps that focus on business needs at the onset of any project, rather than later.

MATTER IDIQ is a DoD-wide, single-award IDIQ with a total ceiling of \$500m. Monkton's industry-leading innovation for secure mobility was recognized by the DoD in the issuance of our Phase III Small Business Innovation Research (SBIR FA2595-20-D-0001) through the United States Space Force. From strategy and planning, mission apps as a service, down to developer training classes, MATTER offers a solution to support the warfighter for every mission.
